

# MIFTAH FARIDL AL-ANSHARI

## Senior Mobile Application Developer

089654711175 • m.faridl441@gmail.com • linkedin.com/in/miftah-faridl • Cimahi, Jawa Barat, 40533

### Summary

---

Results-driven Mobile Developer with 5+ years of experience building cross-platform and native applications using Flutter, Java, and Kotlin. Experienced in delivering scalable and high-performance solutions for enterprise and government systems. Skilled in secure authentication (SSO, OAuth), real-time features, and modular architecture using Clean Architecture and BLoC, with a strong focus on performance, maintainability, and user-centric design.

### Experiences

---

#### PT. Mediatama Kreasi Informatika

##### Senior Mobile Developer

01/2022 - Present

Developing scalable mobile applications for enterprise and government systems, focusing on secure authentication, real-time features, and maintainable architecture.

- Developed cross-platform mobile applications using Flutter for enterprise and government-scale systems.
- Implemented secure SSO authentication using Keycloak, OAuth (Azure AD), and role-based access control.
- Designed and applied Clean Architecture (data, domain, presentation) with BLoC and repository pattern.
- Built real-time features using Socket.IO, including event handling and live data synchronization.
- Integrated RESTful APIs with robust error handling, data parsing, and state management.
- Collaborated with backend engineers and UI/UX designers to deliver scalable and user-centric features.
- Translated UI/UX designs and wireframes into high-quality, maintainable Flutter code.
- Improved application performance through refactoring, lazy loading, and optimized state management.
- Implemented offline-first strategies using Hive and local storage for caching critical data.
- Developed reusable components and modular widgets to improve development efficiency and consistency.
- Integrated third-party services such as maps, file handling (PDF preview/export), and secure storage.
- Ensured application stability through debugging, bug fixing, and continuous improvement practices.

#### PT SampulKreativ Technology

##### Ruby on Rails Developer

06/2020 - 12/2021

A technology company specializing in custom software development and digital solutions.

- Developed and maintained scalable backend systems using Ruby on Rails based on product requirements and sprint planning.
- Designed and implemented RESTful APIs, including secure authentication using JWT.
- Collaborated closely with Scrum Master, consultants, and cross-functional teams to gather requirements and deliver features iteratively.
- Participated in Agile ceremonies including daily stand-ups, sprint planning, and progress reviews.
- Contributed to both backend and frontend development using Ruby on Rails, JQuery, HTML, and CSS.
- Diagnosed and resolved critical bugs, ensuring system stability and improving overall application performance.
- Assisted in enhancing existing features and maintaining code quality through continuous improvement practices.

#### PT. Aplikanusa Lintasarta

##### Internship Student

06/2019 - 12/2019

Independent mobile development projects

- Developed Android-based meeting room booking application (mobile + web admin).
- Implemented scheduling and booking management features.
- Assisted in invoice processing and shipment database management.
- Created tools to support logistics workflows (shipping loader).
- Generated invoices, SSP, and payment documents.
- Handled invoice distribution via email.
- Provided technical support (printer installation & troubleshooting).

### EDUCATION

---

#### Universitas Terbuka

##### Bachelor of Information Systems (In Progress)

06/2023 - Present

#### SMK Negeri 1 Cimahi

##### High School Diploma (4-Year Program)

06/2016 - 06/2020

# Projects

---

## MKI Hub (HRIS)

Human Resource Information System for managing employee data, attendance, and internal approval processes.

- Developed HRIS mobile features (attendance, employee data, approvals).
- Integrated REST APIs for internal system operations.
- Ensured secure data handling across modules.
- Collaborated with cross-functional teams for feature development.

## E-Office BKPM

Digital internal platform for managing employee operations such as attendance, leave, and approval workflows in a government institution.

- Developed attendance, leave, and presence modules.
- Built role-based dashboards and reporting features.
- Integrated SSO (Keycloak & Azure AD).
- Implemented secure PDF export and file preview.

## Komplekita

Residential management application enabling communication, services, and emergency handling for residents and management.

- Developed mobile app using Clean Architecture and BLoC.
- Implemented real-time panic button tracking and nebeng with Socket.IO.
- Integrated maps and live location tracking.
- Applied modern UI/UX with Material 3.
- Implemented offline data caching.

## SiPENA OJK

Secure document and correspondence system for managing confidential files and approval processes.

- Developed secure document viewer and approval workflows.
- Implemented role-based access and disposition system.
- Managed state synchronization and caching.
- Improved app performance and stability.

## WFM (Work Force Management)

A field operations management tool

- Developed a cross-platform app for workforce task scheduling with real-time location tracking
- Designed UI/UX and integrated Google Maps with geofencing and distance calculations
- Implemented offline data caching and real-time database integration

## KlikGazz

Gas delivery service application

- Developed and enhanced Android applications for gas delivery services
- Applied MVP architecture for modularity and testability
- Integrated Google Maps API for improved delivery experience

# Skills

---

Programming: Languages: Dart • Kotlin • Java • PHP • Javascript • Ruby

Frameworks: Flutter • Laravel • Codeigniter • React js • Next js • Node js • Ruby on Rails

UI/Frontend: HTML • CSS • Bootstrap

Design Patterns: BloC • Cubit • MVC • MVP • MVVM • Clean Architecture • Repository Pattern • Provider • GetX

Databases: MySQL • PostgreSQL • Redis • Firebase Realtime Database

Tools & OS: Git / GitHub / GitLab • CodeMagic • Windows / MacOS / Linux

Integrations: GCP • Firebase • Google Maps • REST API • JWT • OAuth • Stripe • SocketIO • Twilio • Xendit • AI • minIO
